Instituto Tecnológico De Cancún

Fundamentos de Telecomunicaciones

Tarea: Investigar Sobre El Concepto De SDN

Ingeniería En Sistemas Computacionales

Alumno: Pérez Ovalle Alan

Docente: Ing. Ismael Jiménez Sánchez

Horario 05:00 Pm – 06:00 Pm

In Telecommunications Fundamentals it is essential to have an administration in the networks, which serves both to create and control in a more efficient way the different components of the hardware that is being used with the support of a software to have better adapted and allows programming network behavior in a centrally controlled manner by software applications that use open APIs. By opening up generally closed network platforms and implementing a common SDN control layer, operators can manage the entire network and its devices consistently, regardless of the complexity of the underlying network technology.
